use your mobile  
phone  
everywhere***

Without running out of  
power ....

***Manual  
Charger***

**DKMNV** DEVICE

## What is a manual charger?

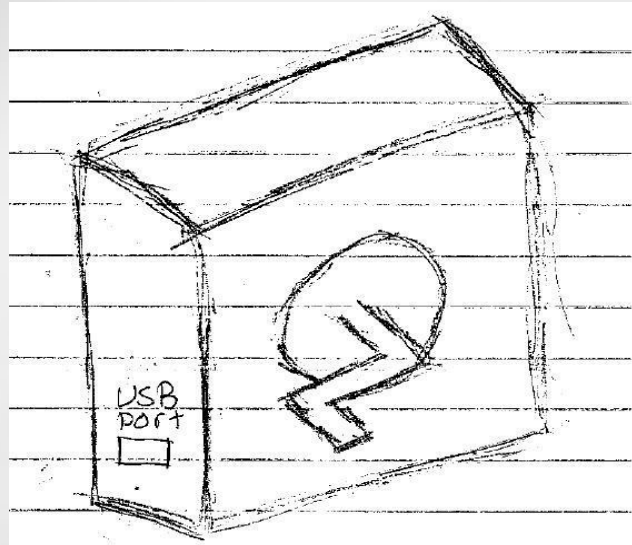

A manual charger is a device you can go to school, forest, city and yes where else you will.

It's nifty with its handle, it can swivel around to charging a cell phone for example.

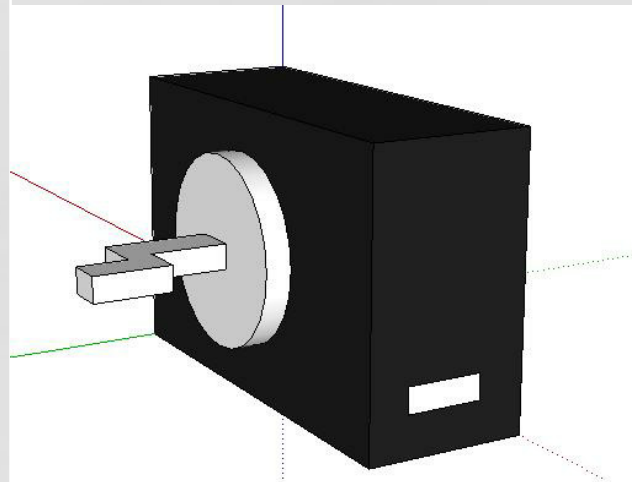

As said, we can take it anywhere, it fits in your pocket, car, or bike path if this is what you'd rather, or other miscellaneous places.

It is easy to handle, it's just turning the small handle, then power is charged to your cell phone.

The target group is from 13 and up, as the younger ones has risk of electric shock by incorrect use.

Here is a picture of the sketch to the product.

Here is a 3D image of the Product.

## DKMNV Device

DKMNV Device is a new company that started up recently.

We started our first project, which is a manual charger, we have more innovation in our minds, but for now we focus on the project we are working on.

We are a Danish company located in Copenhagen, we made the choice to start there because we felt like it was the right place, as well we will not have a cheap rent

Although we are located in Copenhagen, it does not mean that we do not try yo drill for other countries ,but we will still keep in contact with Danish society.

We hope that our hand-operated manual charger will be finished by the fourth Quarter of 2010 or first Quarter of 2011.
